

Multitex

Feminine hygiene - Baby diapers - Incontinence

Multitex

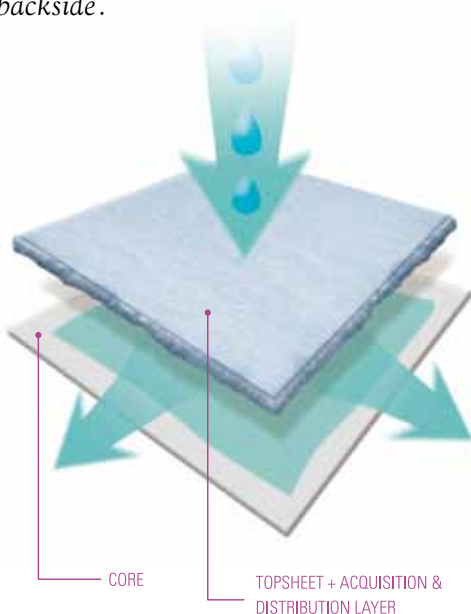

Feminine hygiene - Baby diapers - Incontinence

Topsheet + High Loft ADL

MULTITEX line includes multi-layers non-wovens developed with Airthrough Bonded technology. **MULTITEX** combines one unique easy-to-work structure: soft tosheet and high loft ADL. The use of **MULTITEX** materials in the production of baby diapers, incontinence and feminine hygiene pads offers the converter great advantages, as:

- Improved performance: if compared to a similar standard structure composed of 2 separate layers, **MULTITEX** shows faster acquisition time and lower wetback, due to the absence of any kind of glue between tosheet and ADL;
- Cost saving: no glue, less transport and storage costs, possibility to reduce the whole basis weight of the structure due to better performance;
- Sustainability: less energy consumption to produce, to transport, to store and to convert the **MULTITEX** material.

MULTITEX nonwovens offers soft, textile touch skin-side and a voluminous structure able to enhance the fluid acquisition and distribution backside.

In addition to that, **MULTITEX** layers can be treated with a wide range of natural finishes as Aloe Vera, Vitamin E, Silk Protein, Chamomile and additional substances.

EMBOSSED MULTITEX have also been designed to add a fancy look, with geometric or floral patterns, or a superior tridimensional effect.
